

iter 0
0 links, 0 indexes

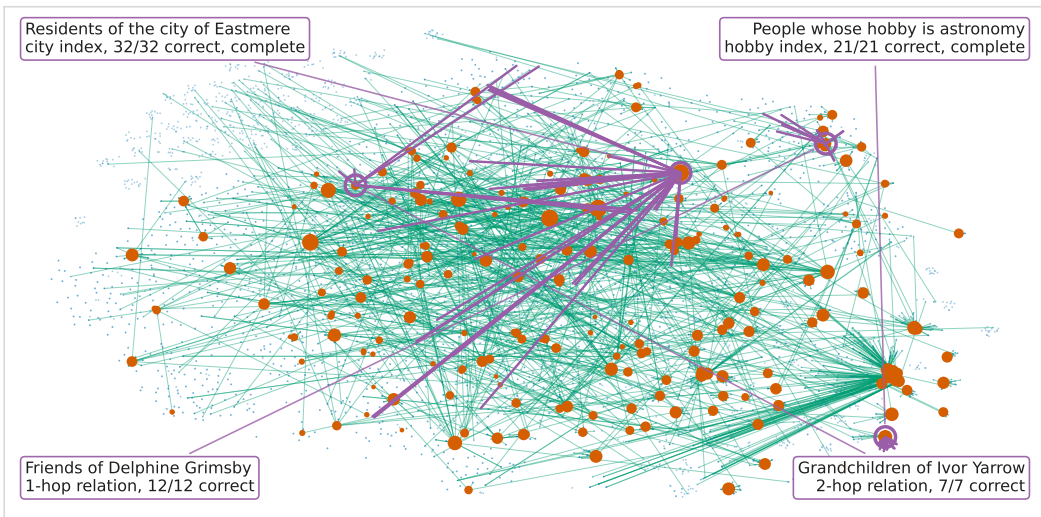

iter 100
1635 links, 235 indexes

iter 200
1913 links, 284 indexes

final store: four indexes whose links were all verified correct, and the documents they reach

- document (position = semantic embedding, t-SNE)
- authored index document (size = degree)
- link
- fan-out of a labelled index
